### Night Probe Mini Gen 2+

Night Probe Mini is one of the most compact and lightweight NV attachments in the world's marketplace. The attachment is 132mm long, weighing 440g. Night Probe Mini mounts directly in-front of the daytime optics using a clip-on mounting system. The advantage of the night vision attachment is quick and easy conversion of the daytime scope for night time operation since no re-zeroing is required. There is no shifting of the impact point and no need to adjust settings of daytime optics. The kit comes with a flip-up protective lens cap, a clip-on adaptor with quick release levers and a set of fitting rings with two kit options: BE26140/BE36140 kit is designed to fit with 42mm-60mm objective lens diameters and BE26141/BE36141 with 24-40mm objective lenses, all packed in a tactical protective pouch. There is an optional side mount to mount Night Probe Mini onto the rifle in-line with the daytime tactical scope.

Night Probe Mini is built with a specially selected image intensifier tube for optimal performance and resolution.

Compact and lightweight  
Automatic brightness control  
Precise internal lens focusing mechanism  
No re-zeroing required  
Integrated weaver rail

Clip-on mounting system for quick installation  
60 hours run time from 1 battery  
For scopes with 24mm to 60mm objective  
Water-resistant, corrosion and dust resistant

Model	Night Probe Mini gen 2+
Magnification	1x
Lens diameter	30 mm
IIT	Generation 2+ / 60-72 lp/mm
Field of View	16°
Focus range	7 m to infinity
Exit pupil	40 mm
Optimal daytime scope magnification	2x - 5x
Detection range	up to 250 m
Dimensions	132x62x78 mm
Weight	440 g
Power supply	3V (1 CR123)
Battery life span	Up to 60 hours
Operating temperature	-30° - +50°
